- Quick and easy provisioning allows you to focus on mission-critical work

Voice services you can rely on

Your voice system is a vital connection between you, your customers and your suppliers. It needs to provide dependable, high-quality service you can count on from a company you trust. ISDN Primary Rate Interface (PRI) service gives you that connection and helps you manage your business with industry-proven technologies that let you focus on clear communications with your customers.

ISDN PRI is a switched-trunk service that provides matchless service quality for up to 125 phone stations per trunk over a network with proven 99.999% availability. The system speeds and smoothes the flow of information without the expense of dedicated lines and special cabling. As your needs grow, the functionality of ISDN PRI will continue to provide clear digital connectivity that is time-tested and reliable.
