

CenturyLink™ Domestic Private Line

Protect your virtual enterprise and secure traffic between locations

Benefits

- **Reliable transport service** supports multiple applications (e.g., data, IP, ATM, voice, video) and flexible by allowing you to build network configurations
- **Cost efficient** by allowing you to combine multiple incongruent services over one line and aggregate slower speed services on to high-bandwidth trunks
- **Secure** with a dedicated facility for your use, protecting the confidentiality of your information; making this one of the most secure services available
- **Performance** includes SLA circuit availability of 99.999% end-to-end
- **Continuity of operations** for disaster recovery with Enhanced Diversity routing
- **Minimal delay** by accommodates even the most delay-sensitive applications

Extend your market reach with advanced communications systems

As the speed of virtual business accelerates with newer and better technologies, your need to protect your business operations from competition and downtime becomes even greater. Our Domestic Private Line reduces uncertainty within your network environment. Domestic Private Line helps you manage business impacts when it comes to changes in demand. You'll also know your traffic is transmitted quickly and securely via an end-to-end private connection. Deployed over the CenturyLink network, a complete range of Domestic Private Line services is available for your business needs.

Description

As your company delivers more electronic information over greater distances, the need to transmit data, video and voice reliably and securely becomes essential. Domestic Private Line uses synchronization technologies so all of your private line traffic—from DS-0 to OC-N—is delivered via high-speed connections. We offer a variety of digital Domestic Private Line speeds:

- DS-0 (64Kbps)
- Fractional DS-1 (128Kbps and up)
- DS-1 (1.544Mbps)
- DS-3 (45Mbps)
- OC-N (155Mbps and up)
