

CenturyLink IP Long Distance and Toll Free Services

Cost-effective and accessible services extend your reach

Long distance and Internet protocol (IP) toll-free service is a fundamental component of any business and a building block in your virtual enterprise that includes voice, data and networking solutions. With high-quality long distance and IP toll-free service over our fiber optic network, you can enhance your suite of Internet protocol (IP) telephony services, while connecting with your customers and employees.

IP Long Distance and IP Toll Free Services combine the cost effectiveness of voice over IP (VoIP) with the traditional accessibility of the public switched telephone network (PSTN). With IP Long Distance and IP Toll Free Services, you can extend your communications capability to include domestic and international long-distance outbound voice and inbound toll-free calls.

Custom solutions that fit your business

Service is designed to ensure that calls always get to where they are needed. Network diversity and proactive functionality are provided through geographically-redundant routing, physically-diverse locations, IP address security and fraud protection. In addition, your business is covered with 24/7/365 network monitoring and management to ensure near 100% network uptime and real-time troubleshooting.

Scalable service offering that fit your business, now and in the future

IP Long Distance and IP Toll Free Services are an adaptable IP telephony solution that integrate through a single point of access without the need for multiple TDM switches and a separate data connection; putting your business on the foundation for the future of communications services.

Choose from several term contract options and further customize the service with flexible pricing, domestic and international flat-rate pricing and the option for domestic tiered LATA-based pricing.

Try before you buy

We understand that selecting a long distance provider is important so we offer a 5-day free trial of IP Long Distance and Toll Free Services to new customers. Our trial offer:

- Includes up to 5 days of FREE interoperability testing
- Does not require a service contract; however, a testing agreement is required
- Only requires Internet access with CenturyLink or other provider
