

Speed Calling 30

Dialing the numbers you call the most is fast and easy with Speed Calling 30. Simply make a list of the thirty numbers you want to program and assign each one a two-digit code from 20 to 49.

To program

Then enter a two-digit code + phone number, including any necessary area code or access code. Example: To program phone number 602-555-1234, press ***75** + Code **20** + area code **602** + 7 digits **555-1234**

To dial

Example: Code **20** + **#** dials 602-555-1234

Please refer to the back for more detailed instructions.

How to use Speed Calling 30

- Make a list of your thirty most important or frequently dialed numbers.
- Assign each a two-digit code from 20 to 49.
- Lift the receiver and press ***75**.
- Press the two-digit code you've selected, followed by the telephone number assigned to that code.
Include your access code and/or area code if it's a long-distance number.
- You'll hear a tone to let you know the number is programmed.
- Repeat these steps for the other numbers on your list.

To call someone on your Speed Calling list

- Press the code (20-49) you gave to the number you want to call, followed by the **#** key.

To change a programmed number

- Repeat the first 5 steps above. You don't need to reprogram the numbers you want to keep.

For Rotary Phones

If you are using a rotary telephone instead of a touch-tone, dial **1175** (instead of ***75**), then dial the code you gave to the number you want to call, without the **#**. The phone will hesitate a moment, then dial the number.

Add Continuous Redial to make Speed Calling 30 even more helpful

To save even more time when dialing, let Continuous Redial keep trying those busy numbers for you. It will automatically redial the number you're trying to reach, so you're free to do something else until the call connects.

Measured service and long-distance charges may apply for all completed calls. Optional services not available in some areas.
